Experiment - 2

AIM: To create an AWS free tier account to provision the resources.

Description:

An AWS account provides access to the AWS Management Console, where cloud resources can be created and managed. A monthly cost budget was configured to monitor spending across AWS services and send an email alert when actual costs exceed $0. The budget amount is set to $1.00 because AWS does not accept a zero-dollar budget. A budget alert helps monitor costs but does not stop resources or prevent charges.

Steps:

1. Sign in to the AWS Management Console.

2. Open “Billing and Cost Management” and select “Budgets”.

3. Choose “Create a budget, then select” “Customize (advanced)” and “Cost budget”.

4. Enter the budget name “Zero-Budget-FreeTier”.

5. Set the period to “Monthly, renewal to” “Recurring”, and start month to the current month.

6. Set the budget amount to “$1.00” and keep the scope as “All AWS services”.

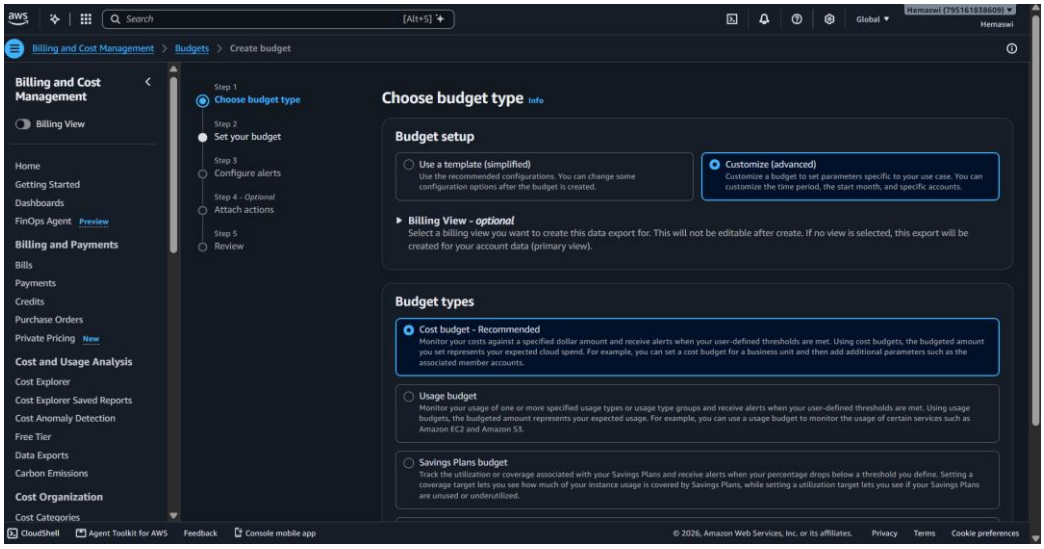

7. Add an alert threshold of “$0.00, measured against” “Actual costs”.

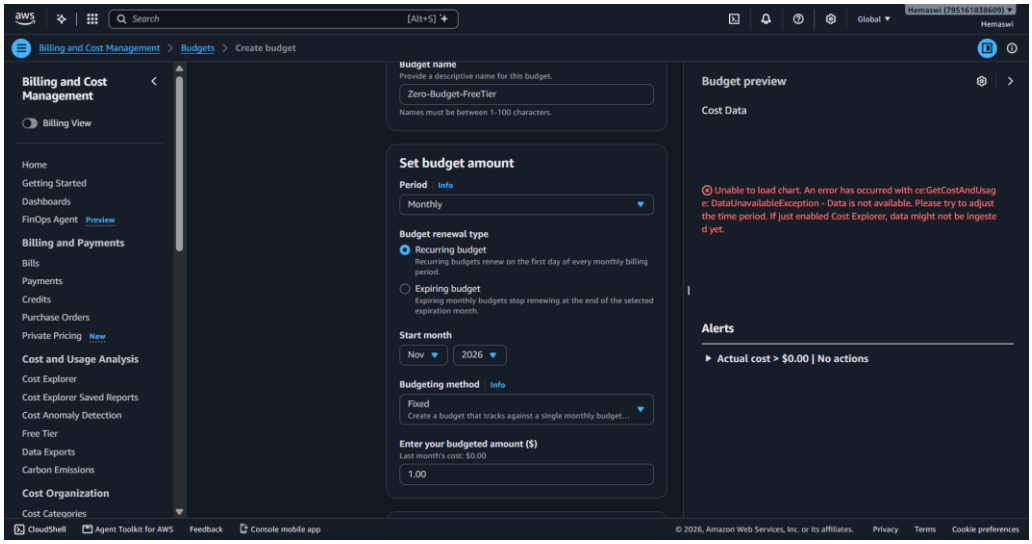

8. Enter an email address for notifications and leave optional actions unconfigured.

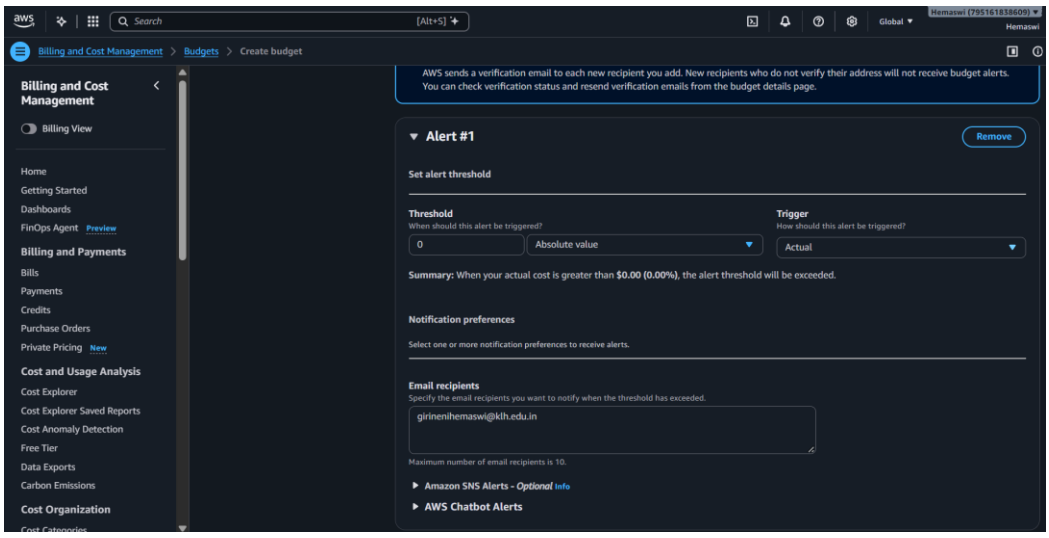

9. Review the settings and create the budget.

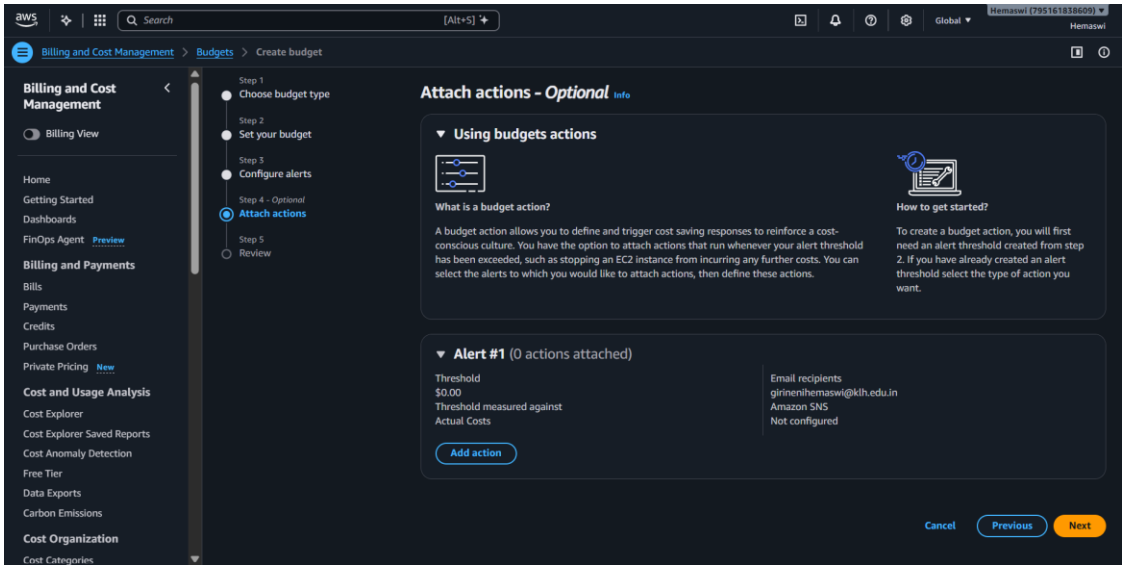

10. Verify that the budget appears in the Budgets list and confirm the alert email if AWS requests verification.

Budget setup
Use a template (simplified)
Use the recommended configurations. You can change some configuration options after the budget is created.
Customize (advanced)
Customize a budget to set parameters specific to your use case. You can customize the time period, the start month, and specific accounts.
Billing View - optional
Select a billing view you want to create this data export for. This will not be editable after create. If no view is selected, this export will be created for your account data (primary view).
Budget types
Cost budget - Recommended
Monitor your costs against a specified dollar amount and receive alerts when your user-defined thresholds are met. Using cost budgets, the budgeted amount you set represents your expected cloud spend. For example, you can set a cost budget for a business unit and then add additional parameters such as the associated member accounts.
Usage budget
Monitor your usage of one or more specified usage types or usage type groups and receive alerts when your user-defined thresholds are met. Using usage budgets, the budgeted amount represents your expected usage. For example, you can use a usage budget to monitor the usage of certain services such as Amazon EC2 and Amazon S3.
Savings Plans budget
Track the utilization or coverage associated with your Savings Plans and receive alerts when your percentage drops below a threshold you define. Setting a coverage target lets you see how much of your instance usage is covered by Savings Plans, while setting a utilization target lets you see if your Savings Plans are unused or underutilized.

Using budgets actions
What is a budget action?
A budget action allows you to define and trigger cost saving responses to reinforce a cost-conscious culture. You have the option to attach actions that run whenever your alert threshold has been exceeded, such as stopping an EC2 instance from incurring any further costs. You can select the alerts to which you would like to attach actions, then define these actions.
How to get started?
To create a budget action, you will first need an alert threshold created from step 2. If you have already created an alert threshold select the type of action you want.
